

# Rollers Rebuilding

RM-8

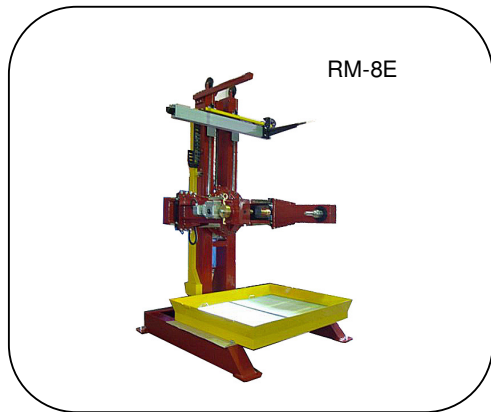

## Main Features

Adjustable arms to suit different sizes of rollers

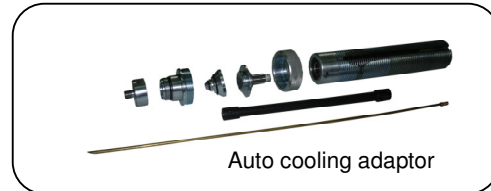

Rotary water cooling device for cooling of work-piece during welding process

A pair of clamping plates which is fixed to the arms can be used to secure the work-piece without disassembling and reassembling of the rollers and idlers for welding

**Tractor Rollers Rebuilding System** is designed to facilitate the welding of Tractor Rollers and Idlers, without the need to fully disassemble the work-piece. It is an automated system widely used in the industry to increase productivity and quality in the welding of Tractor Rollers and Idlers.

RM-8E

Auto cooling adaptor

## Technical Specifications

Description	Specification
Power Requirement	AC 230 V, Single Phase, 50 Hz
Throat Capacity:	Diameter 1000 mm
Rollers Width	500 mm
Rollers Max. Weight	250 Kg
Tilting Angle	$\pm 60^\circ$
Cooling	Force Water Cooling
Acceptable Welding Head	Standard SAW or FCW

Note: Due to the continuous improvements of our products, the design and specifications are subjected to change without prior notice
