

## Tried & tested industry solutions

Time is money in the offshore business so when problems arise with pipeline and associated equipment machining you need a company with the experience, technical expertise and equipment to provide a quality lead, cost effective solution.

We have specialised equipment for sub-sea machining of piles, cassions, pipelines and wellheads, all of which are available to purchase outright or to hire on flexible terms.

Our pipeline maintenance and construction service provides a cost effective solution for damaged land or sub-sea pipelines using a cold cutting system that produces accurate weld preparation.
